# PROJECT PROPOSAL

COMP3003 - Project Tile: Criminal Alarm Mobile App

20216468 Siyu Yao (scysy2) - CS

October 19, 2022

## 1. Background and Motivation

People face the fear and powerlessness of sudden danger in social life. According to the latest data from the UK Office for Notional Statistics, 63% of people felt unsafe after dark, and more than 24% stop walking in quiet area after dark simply because they feel unsafe [1]. There are numerous reports and news like "Sarah Everard murder" [2] and "Sabina Nessa murder" [3], with victims walking home at night or on a "five-minute" walk to meet friends. However, when family and friends of the victim initially put-up missing notice on street, most of the response was nonchalant, reducing the chances of the family and friends getting further information [4].

Even though there are many existing apps focus on personal safety, based on my actual experiences with these apps (table 1), none of them have the functionality of publish and report missing or wanted people and have issues to some extent.

Table 1: Existing solutions and their weakness

Арр	Weakness
(All)	Doesn't have publish and report missing or wanted
	people function
bSafe / Hoot / Sister /	Registration issue: unable to verified phone number.
WeHelp	Unclear error message
Parry	All features only available after subscription
Noonlight	Registration issue: only allow people who has US
	phone number to register
WalkSafe+ / iSharing	Doesn't include an option to call 999, inconvenient
	SOS button
OneScream	Active alert only when detected panic scream
Ursafe / Bond/	Limited free features
Parachute	
SafeUp	Only 'safety checks' no 'emergency help'

## 2. Aims and Objectives

The aim of this project is to create a functional iOS mobile app that have two main purposes. One is to ease the anxiety of walking or staying alone. The other is to increase the likelihood of finding missing pet, person or police wanted criminal.

In order to achieve these aims, the key objectives are:

- 1. Allow user to register, login and add other users as contacts.
- 2. Implement location report interaction (hold down to keep, release to send help and location to contacts and authority).
  - 3. Implement audio recording and video recording.
  - 4. Implement fake phone call.
  - 5. Allow user to report potential unsafe and update to all users.
- 6. Allow user to publish missing pet/person information and report possible seen.
  - 7\* Allow user to customize app home page.
  - 8. Make demonstration video as user manual.
  - 9. Upload the app to TestFlight and receive user feedback.
  - 10. Iterate app according to user feedback.

It should note that given the uncertainty of the subsequent progress, the objective 7 will be met when there is sufficient time left in the project. If falls behind schedule, this may be considered for abandonment.

#### 3. Work Plan

#### Documentation

This project will involve usability tests with users, including user data collection. Therefore, full ethics clearance is required.

#### Initial Planning

I need to familiarise with Swift and SwiftUI for iOS development as I never used them before, so I take this into account in initial planning stage.

#### Implementation

I will use Git as version control tool. Each task in implementation section is represents a fully functional component. Each component is implemented following the sequence of first building database, then API and finally the component interface. Finally, the whole system is composed of multiple fully functional components.

## Testing and Iteration

Full ethics clearance is required, and all users participate usability tests must be taken after clearance is given by the committee. Considering I have 70 credits worth of modules in spring semester compared to 50 in autumn semester, more tasks are planned to complete before spring, leaving buffer time for other modules or falling behind project schedule.

User study and following application improvement will be one of the key point in this project, and more uncertainty may show in iteration. The main work in the spring semester is planned to focus on this.

The Gantt chart on the *last page* shows the planned project schedule, which I will be using to track my progress throughout the project.
